

Kabir Sen

Platform Engineer | Bengaluru, India | kabir.sen@example.com | github.com/kabir-sen

PROFILE

Platform engineer with four years of hands-on backend, cloud, reliability, and infrastructure-as-code experience. Led production multi-region failover for event-driven services serving 18,000 requests per second, with documented recovery objectives and incident ownership.

EXPERIENCE

Platform Engineer | Northstar Commerce | 2022 – Present

- Led the design and quarterly failover exercises for active-active Java services on AWS EKS across Mumbai and Singapore, sustaining 18,000 requests per second and restoring critical traffic in 11 minutes during a regional simulation.
- Built and operated Kafka-backed order and inventory services; introduced idempotency and consumer lag controls that reduced duplicate-event incidents by 87%.
- Wrote Terraform modules for EKS, VPC networking, IAM, and regional routing; enabled reproducible environments for six product teams.
- Introduced OpenTelemetry tracing, Prometheus service-level objectives, Grafana dashboards, and paging alerts for 24 services; reduced mean time to diagnose production incidents from 31 to 12 minutes.
- Owned incident reviews, wrote operational runbooks, and partnered with security, support, and product teams during releases.

Software Engineer | Atlas Systems | 2021 – 2022

- Developed Java REST APIs and asynchronous workers for a logistics platform, deployed through Docker and Kubernetes on AWS.
- Added structured logging, automated integration tests, and release checks for customer-facing services.

SELECTED PROJECT

Regional Resilience Drill Toolkit | Internal platform project

- Created a reusable Kubernetes and Terraform test harness that validates DNS failover, queue replay, health checks, and recovery-time objectives before production disaster-recovery drills.

SKILLS

Backend Java, REST APIs, microservices	Distributed systems Kafka, idempotency, event-driven services	Cloud and platform AWS, EKS, Docker, multi-region failover	Reliability OpenTelemetry, Prometheus, Grafana, SLOs
Infrastructure as code Terraform, IAM, VPC networking	Collaboration Runbooks, incident reviews, stakeholder delivery	Databases PostgreSQL, Redis	Delivery GitHub Actions, automated tests

EDUCATION

B.Tech, Computer Science | 2021
